Highlights

- The WGS 115 – Multitalent – is an extremely compact, PC-controlled money changer with touchscreen technology.

It can be installed anywhere that requires banknotes and up to 6 different coins to be dispensed.

The system is also suitable for dispensing tokens.

The recycling systems used for processing coins and notes minimise the reserve of cash required and therefore increase the security and functionality of the machine.

- The WGS 115 changes banknotes and coins into coins, tokens or banknotes and achieves a high standard of reliability in checking, processing and dispensing.
- The Linux-based cash software, Easy Selection, allows the operation of an ELME OPP B50 for processing services with the EC card on the WGS 115.
- Printer with automatic cutter for customer receipts
